

Fall 2021 – MatLab boot camp  
Assignment 1

**Assignment:**

Using the GUI, import “Subject Interval Timing Data 1” into MatLab. Give the dataset a name.

Using the GUI, make a graph that looks like that one ->

Save it as a .png. Email it to me before our next meeting.

**Bonus assignment if you are feeling fancy:**

Using the same data set (Subject Interval Timing Data 1), make the graph to the right.

You may need to write one line in the command window to average the data. (If anyone knows how to average data using the GUI, let me know!)

Save it as a.png and send it to me before our next meeting.
